Why Dental Implants?

Once you learn about dental implants, you will finally realize there is a way to improve your life. When you lose several teeth – whether it’s a new situation or something you have lived with for years – chances are you have never become fully accustomed to losing such a vital part of yourself.

Now you can start over! With titanium tooth roots your dentist can offer replacement teeth that look, feel and function just like natural teeth. Dental implants can be your doorway to renewed self-confidence and peace of mind.

Dental implants fuse with the jawbone to form a secure foundation for tooth replacement. This concept for oral rehabilitation was developed more than thirty five years ago by a Swedish scientist and orthopedic surgeon, Dr. Per-Ingvar Brånemark. With his pioneering research, Dr. Brånemark opened the door to a lifetime of renewed comfort and self-confidence for millions of individuals facing the frustration and embarrassment of tooth loss.

The first step is the placement of titanium implants to replace lost teeth. These implants will remain covered underneath the gum for approximately 3 to 6 months. During this time, the implants should fuse to the bone.

The second step of the procedure involves uncovering the implants and attaching a post to each implant. This completes the foundation on which your teeth will be placed. In some instances, your surgeon may decide to place the posts at the time of surgery.

The final step is the placement of your new teeth by your dentist. First a bar or other attachment will be affixed to the posts, completing the foundation on which your removable restoration will be placed. With techniques that ensure optimal size, shape, color and fit, this removable restoration will blend with your facial characteristics, while providing support needed for natural appearance.

Patient Removal Option:

Life with a full denture means more than just missing your teeth. Problems associated with a denture extend far beyond tooth loss, affecting comfort, ability to chew foods, even self-image and social considerations. The challenge is to provide stable function, without using denture adhesives, that will fulfill your expectations for appearance, confidence and security.

Appearance

Besides good function, the ideal results must look like natural teeth both to you and to others. The solutions possible with Nobel Biocare products offer the best appearance possibilities available in dentistry.

Confidence

The ideal replacement for missing teeth must also feel like natural teeth and be easy to clean. It is important for you to know your teeth are stable while eating, allow you to speak properly, and eliminate the bulkiness and sore gums sometimes associated with dentures.

Security

The long term safety of replacing your lost teeth with dental implants is well established and your doctor will discuss with you a treatment plan designed just for you.

The hope of restoring something important that’s been lost, especially in the human body, is an exciting possibility. With Nobel Biocare implants, it’s not just a hope. It’s a reality.
